EDUCATION

University of California, San Diego
Bachelor of Science in Computer Science

September 2024 – June 2026

Ohlone College

Associate of Science in Computer Science & Mathematics | Honors Student

August 2022 – May 2024

WORK EXPERIENCE

Software Developer Intern / Frugal Innovation Hub, SCU

June 2023 – August 2023

- Built **Easy Tracker**, an Android personal finance app in **Flutter (Dart)**, serving ESL users — implemented 4+ modular UI components for transaction logs and portfolio visualization, reducing average screen load time by ~25%
- Integrated **Firebase Authentication** and real-time database sync, enabling secure login and live data updates with zero reported auth failures during the demo period
- Collaborated in **weekly cross-functional technical debriefs** with students and industry professionals, iterating on 3 major feature revisions based on feedback

PROJECTS

React Portfolio Website / Personal Project | React, JavaScript, CSS, REST APIs

Jan 2026 – Present

- Designed and built a fully **responsive personal portfolio** in **React**, featuring reusable component architecture, dynamic routing via React Router, and state-managed project filters
- Integrated live **REST API** calls to fetch and display GitHub repository data, reducing manual content updates to zero
- Implemented **dark/light mode theming** using React Context API and CSS custom properties, improving UI consistency across 10+ components

Diamond Stock / Diamond Hacks – ACM Hackathon | TypeScript, React, HTML, CSS, PostgreSQL

April 2025

- Led frontend development for a real-time **investment education web app** built under 24 hours; implemented **3 interactive TypeScript/React components** supporting dynamic stock data workflows
- Integrated **Gemini API** to generate and randomize quiz questions based on user interaction, reducing static content reliance by 100%
- Designed structured **PostgreSQL** data schema for reliable parsing and consistent rendering of processed financial data

Pokémon Learning Hub / Group Project | HTML, CSS, JavaScript, PWA, Service Workers

- Developed the **home page experience** and **collection page**, integrating image assets, nav links, games, and dynamic state updates across 3 feature modules
- Built a **dropdown filtering system** supporting filter-by-favorites and Pokémon type, reducing search time for a 150+ entry dataset
- Implemented **Progressive Web App** support with **Service Workers** for full offline access and installability across mobile and desktop browsers

Autonomous Arduino Cart / Team Lead | C++, Arduino, Embedded Systems

May 2023

- Designed **object-oriented C++ modules** to control motors and process input from LED-based line-following sensors, achieving reliable path tracking across 5+ test configurations
- Implemented autonomous navigation logic detecting a **black tape path** via sensor feedback; led debugging and calibration cycles that improved navigation accuracy by an estimated 40%

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C++, HTML, CSS, SQL, Dart

Libraries & Frameworks: React, Node.js, Flutter, Pandas

Developer Tools: Git, GitHub, Firebase, PostgreSQL, MySQL, Figma, Gemini API, REST/HTTP APIs, PWAs, Docker
